CIT 140 · Week 7 · Data-Quality Report

Meridian Forge · fictional inspection export v1

Learner name / date	Daniel Rodriguez 11-7-26
Import status	Load all 20 rows first

Amber cells: your responses. Other results calculate from Prepared and Audit.

Rule	Check	Rows flagged	Share of all rows	**Affected Row_IDs**
Q01	Machine ID is required	2	10%	R03, R14
Q02	Work order is unique	2	10%	R05, R06
Q03	Status uses the agreed list	2	10%	R08, R16
Q04	Duration is in range	3	15%	R10, R18, R20
Q05	READY identifies an inspector	3	15%	R03, R07, R12
Distinct rows with any issue		11	55%	Count each row once, even when several Q-rules flag it. Do not add the five counts.

Scope: all 20 supplied records. Q02 flags every row in a repeated Work_Order_ID group; extra duplicate copies are a different measure. Unresolved fields remain flagged, not guessed.

Source: authored CIT140 case W07-S01 (Raw) and W07-S02 (rules). Report a data-quality finding, not a machine safety clearance. Explain your evidence and next action on page 2.

Week 7 · Explanation and refresh evidence

Finding: Row_ID, Q-number, actual value, source and effect

R03 is READY but has no Machine_ID or Inspector_ID. This goes against Q01 and Q05 because a Machine_ID is required for every record, and a READY status must identify an inspector. This record does not identify the machine or an accountable inspector.

Next action: what to verify, who owns it, and how to retest

Ask the Maintenance Records Owner should confirm the Machine_ID using the original inspection record and the Shift Supervisor should confirm the the missing inspector_ID.

Limit: why you cannot guess a correction or prove accuracy

I cannot guess a correction because the spreadsheet does not have enough evidence to give the correct values.

Professional connection: one framework idea and how you used it

I applied the governments fit-for-purpose principle of data quality: a record used for readiness review needs an identifiable machine and accountable inspection.

Refresh test: before, changed value, after, and restored result

Changing R01's Inspection_Minutes from 20 to 0 made Q04 increase to a count of 4 rows flagged. Once I restored 20 Q04 went back to 3 flagged rows.

Export only Report: two landscape pages, page break before row 26. Review both pages.
